DETAILED ACTION

Allowable Subject Matter

1. Claims 1-16 are allowed.

The following is an examiner's statement of reasons for allowance: Claims 1-16 are allowed because the prior art fails to disclose or render obvious a method and system for controlled superheating of a compressed natural gas stream for transmission through a pipeline, comprising: dividing a stream of natural gas discharged from a high pressure gas compressor into a first portion and a second portion; passing the first portion of the gas from the gas compressor to a heat exchanger to heat the gas to a predetermined temperature; passing the first portion of gas exiting the heat exchanger to an aftercooler; passing the second portion of natural gas discharged from the gas compressor to the aftercooler without passing it through the heat exchanger, the second portion of gas and the first portion of gas being mixed at the aftercooler inlet and cooled by the aftercooler and discharged from the aftercooler as a cooled gas stream having a temperature no greater than a first temperature; passing the cooled gas stream from the aftercooler to a liquid discharge drum to remove condensate from the cooled gas and discharging from the drum a partially dried gas stream at a second temperature; passing the partially dried gas stream from the discharge drum to the heat exchanger in heat exchanging relation with the first portion of gas from the gas compressor, and superheating at least a portion of the gas stream to a third temperature, the third temperature being controlled by an automated control loop responsive to a differential pressure across the gas compressor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Rojey et al. (US 5,983,915) disclose a method for transporting a compressed natural gas stream from a first point to a destination location through a pipeline, comprising injecting a liquid fraction and anticorrosive additive at least at the first point of the pipeline(see col. 2 lines 25 to line 39 and col. 3, lines 1 to 10).
